Re: Monsanto/Solutia Response to Comments – Part I

REVIEW NOTES

Introduction

On October 27, 2000, Solutia submitted responses to USEPA's comments made on the Time Critical Removal Work Plan, Dead Creek Sediment and Soil in Sauget and Cahokia. This submittal is considered Part I of Solutia's response to comments. My comments are addressed in Part II of Solutia's response to comments.

Comment

Comment 2 Section 4, page 4-2, Subsection 4.2: If the slopes of the landfill cap are increased or the cell needs to be expanded in order to accommodate the volumes of excavated materials, the proposed design changes must be provided to, and approved by, USEPA/IEPA before they are implemented. The wording in the document needs to be revised to indicate these types of changes will be submitted to USEPA/IEPA for review prior to implementation.
